# TK-1100 Tint Paste Custom Color Chart

TK-1100 Tint Paste is a color additive that was designed to be mixed with TK's AS-1 1315 sealer or Bright Kure and Seal to create a tinted opaque curing and sealing compound for concrete.

TK-1100 Tint Paste hides variations of shading in the concrete to create a uniformly and attractively colored finish.

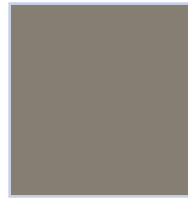

TK-1100 Tinted Paste is available in any of the colors shown (right).

Custom colors are available upon request. Please allow 2 weeks lead time for orders to be fulfilled.

Please see the corresponding technical data guide, material safety data sheet (MSDS), or your TK Products representative for more information.

**Note: The colors shown are simulated. Variations in color may occur due to surface texture, substrate absorption, product thickness and light source. Actual product and color samples are available from TK Products. It is always recommended to apply a test sample to the actual surface to be coated in order to insure color approval.**
